

## Toni and my laptop

My laptop, which is 14 years old, has been having a problem with powering up.

04/18/2025

My laptop, which is 14 years old, has been having a problem with powering up. On one occasion, it would not even start charging, even though the battery is still as good as new. I tried a number of things that were recommended by the experts, most of which consisted of pressing a combination of buttons and waiting, but the laptop wasn't charging.

It occurred to me at some moment that maybe I could ask the Servant of God Toni Zweifel to give me a hand. So, I once again turned off the power from the mains and pressed a combination of keys on the laptop as I said in my heart, "Toni make this work" five times, which, to my estimate, was an approximation of the time to hold down the combination of keys.

Then I released the combination of keys, took a deep breath, and connected the power cable to the laptop. The laptop started charging, and now I am writing this favour from the same laptop!

Thank you, Toni, for interceding for me!
